The Research Program on Biodiversity (PPBio) was created in 2004 in order to further biodiversity studies in Brazil, decentralize scientific production, integrate research activities and disseminate results across a variety of purposes, including environmental management and education. The PPBio's Regional Center of Roraima State was established in the same year in order to enable sampling in the ecosystems of the northernmost state of Brazil. This guide is the result of a 2-year research project conducted by the authors in collaboration with the Federal University of Roraima.

### Grids and modules of the PPBio Roraima
